LOOKING AT OUR EATING HABITS

by Sam Tyler

When you come into the Golden Chef restaurant it looks like any other restaurant. Some customers are ordering food, others are being served by the waiters and some are paying for their meals. However, this restaurant, which is located at Newton University, is actually very unusual. In reality, it is a new research center where Dr. Webster and his team of scientists are using hidden cameras and microphones to film and record everything that happens in the restaurant.

The Sunrise Company, which markets different food products, has given three million dollars to support Dr. Webster's research. They are interested in finding out about people's taste preferences in order to produce a larger variety of products. "The research started a year ago and will continue for the next five years," says Dr. Webster. "We want to discover how people eat and what influences their eating habits. In order to get as much information as possible, we film every movement and every bite taken by the customers. We observe, for example, how long it takes people to decide which food to order, how fast they eat and how much food they leave on their plates."

Besides looking at the customers' eating habits, scientists will observe how making changes in the surroundings affects people's behavior. Dr. Webster explains, "We want to see if changing the lights, the furniture and the music influences the amount of food customers eat and how long they stay at the restaurant. We will even use different scents to find out, for example, if people choose healthier items on the menu when we spray a scent of lemon in the air."

More than 25 students and teachers have agreed to participate in this
25 research. Although there are 25 cameras in the restaurant, customers say
that being filmed doesn't bother them. One student said, "We are used to
cameras everywhere – in shopping malls, airports, and on the streets. No
one pays attention to them anymore." Students also say that they know this
is significant research and they want to take part in it.

30 When the scientists complete their research, they hope to achieve their aim
and know why we eat the way we do. They believe this research will assist
health experts in understanding what influences our choice of food and help
people improve their eating habits.
