

Module C גרסה א'

1. What information is given in lines 1-4?
D) Why scientists think animals can help predict earthquakes.
2. What do we learn from lines 5-10?
B) What historians wrote about animal behavior.
3. Dogs and snakes are mentioned in lines 5-10 as animals that (-).
C) behaved strangely before an earthquake.
4. How did the frogs feel that the pond wasn't safe?
They sensed small movements in the ground.
5. The scientists that are mentioned in lines 11-15 explained (-).
B) why frogs left the pond.
6. What do we learn about the Chinese government from lines 16-22?
A) What information it wanted to get from people. E) How it used the reports it got from people.
7. The warning mentioned in lines 19-20 was helpful. Copy the words in lines 16-22 that show this.
" The government actions prevented a large number of people from being killed or injured. "
8. According to lines 23-27, most scientists believe that (-).
C) many things can cause unusual animal behavior.
9. According to scientists, what were the results of the Chinese government's attempts to predict earthquakes using animal behavior?
Most of the time they failed / They succeeded only once in 1975.
10. According to Dr. Gibson, why can't scientists rely on unusual animal behavior to warn people of earthquakes?
Because animals sense it only a short time before people do (and it doesn't leave scientists enough time to warn people).
